Protect Your Company's Vital Data with Co-location

- 1. Have you ever had the power go down in your office and lost important data?**
- 2. Do you ever lose your Internet connection? Is it vital to the daily operations of your business?**
- 3. Do you have trouble keeping your company's IT room cool enough for your servers?**
- 4. Are you concerned with the possibility of security breaches in your organization?**
- 5. Are you worried that your servers are not sufficiently protected and monitored at all times?**

If you answered yes to any of the above questions, co-location is a great option for your business.

Small and medium-sized businesses have become increasingly dependent on data for their very existence. A staggering 50 percent of businesses that lose their data due to disasters go out of business within 24 months. Co-location offers a cost effective way to protect your company's critical data, reduce operating costs, and improve the efficiency of your IT network.

It's important for every company to implement a data disaster recovery strategy that ensures business continuity, continuous data protection and regulatory compliance. Smaller businesses tend to focus on protecting property, inventory and employees, but forget that a disaster recovery plan for their critical information is absolutely essential. Flood, fire or virus attack can close your business for days and result in the loss of customers and competitive ground. Without a way to recover quickly, many businesses just don't survive. Utilizing co-location is the surest way to protect your company's important data from unexpected disasters.

While small companies may not have considered co-location as a viable option in the past, Co-location Las Vegas was created to meet the needs of small to medium-sized businesses by specializing in "best practice" co-location for less than a full rack, or 42 units. In order to provide the best products and services available, Co-location Las Vegas has formed strategic alliances with national hardware and software manufacturers, including Microsoft, Cisco, Dell, IBM, Hewlett Packard, Citrix, Symantec and VERITAS.

By partnering with Switch Communications LLC, a highly secure and state-of-the-art co-location center, Co-location Las Vegas provides its clients with comprehensive services at a fraction of the cost. Services include redundant power, proprietary climate control and multiple sources for telecom and Internet. Co-location also provides a host of advantages to maintaining an individual data center, such as advanced security, and scalable Internet connectivity.

Co-location Las Vegas is dedicated to providing a highly secure and cost-effective method for companies to protect vital data and equipment. To learn how Co-location Las Vegas can benefit your business, visit www.colocationlasvegas.com.
