

“You want how much for a Rack?”

A communication company was looking for a location to place just 2U of equipment. When they were looking for a co-location facility they found multiple locations that would lease servers and provide $\frac{1}{4}$ or $\frac{1}{2}$ racks, but they had their own equipment and only needed 2U. With Co-Location Las Vegas providing redundant power and internet connections, power-distribution and internal-private VLANS, it was a place they had to be in. They loved the high security physical location, patented cooling methods, carrier independent redundant, scalable internet bandwidth, and an un-equaled power and UPS infrastructure. They were able to save \$800-\$1000 per month and have all of the features and benefits of a rack of their own. In addition, they know they always have IT support ready in the event they cannot manage their equipment remotely by using Co-Location Las Vegas' managed co-location services.
